---

The attached draft conceptual design for 2011 includes recommendations from the Peer Review Report. This was prepared as a possible document to discuss with GE as a starting place to develop a work plan for next season. Once an overall concept is accepted, we can identify details to be added or changed from the original Phase 1 documents. Please review with a critical eye to see if this is where we want to be in 2011. No pride of authorship issues here so be blunt. From a field perspective, we know this is realistic and can be accomplished.

Dave
